THE MESSAGE

“The gulf erection construction is not a success story based on the projects and gains that we have achieved.

At the core of our values and strength lies a promising experience and well established relationship that we ensure to maintain with our clients throughout the growth and advancement that comes with time. “

– George Sawaya, General Manager

The overall competence and progress of the company is dedicated by a group of professionals and experienced managers that teams with our qualified engineers, supervisory staffs and a technically sound work force behind the projects.

ABOUT US

Established in the year of 1980, the **Gulf Erection Construction Company** emerged as a general contracting company in the area of construction and building in Abu Dhabi and Alain.

Being professionals with decades of experience competing in the space of steel structure buildings, we have maintained growth and prominence with the leading infrastructure and technology to meet the developing demands of the country.

Our exclusive area of focus in the economic building solutions that incorporate both user-friendly and green technologies has developed outstanding steel and concrete structured buildings.

We provide complete service right from the design level to execution of the construction plan within the period of completion as promised. The team of experts in all the professional areas of civil engineering, electrical engineering, mechanical engineering and IT contributes to the quality of the job that we affirm.

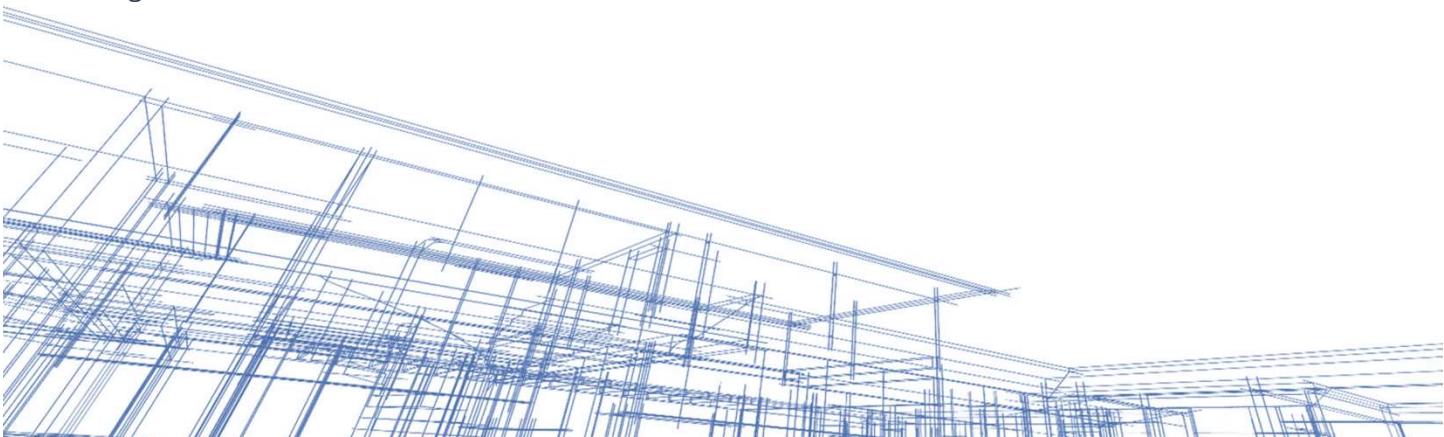

The professional areas of achievements are based on the design and construction of steel buildings and the structural works with MEP that has been certified and approved by **Abu Dhabi Distribution Company (ADDC)**.

The nature of works that we have successfully completed and yet about to complete further includes both **onshore** and **offshore** works. We have served our expertise to wide number of clients that also includes industrial plants and warehouses.

Looking forward to extending our competence in construction and building structures, we have executed successful projects in many areas.

- Design and construction.
- Steel structure buildings.
- Civil works.
- Electrical works.
- Mechanical work
- Information and technology.
- Offshore and onshore works.

The idea of growth and progress is all about providing and maintaining the promising relationships that we established with our clients in terms of trust and reliability of work. From the years of services and successful completion of the projects adhering to the guidelines and regulations of the authority, the company ensures guaranteed service.

FIELD OF EXPERTISE

Throughout these years of experience that we have achieved, we have contributed our expertise in a wide variety of areas. The overall performance of the company is based on the quality and reliability of work that we have managed to deliver in each projects.

- ❖ Showrooms and facilities that includes workshops, car wash facilities and more.
- ❖ Multi storey car parking.
- ❖ Industrial plants and manufacturing factories.
- ❖ School buildings and complete facilities.
- ❖ Shopping malls and complex facilities.
- ❖ Storage facility and bus depots.
- ❖ Cold storages and hatcheries.
- ❖ Onshore & offshore oil field works.

VISION

Establish a benchmark in quality construction and engineering by promising well grounded and reliable works that directly contributes to the development of the country.

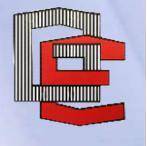

MISSION STATEMENT

- ❖ Quality construction and guaranteed service.
- ❖ Establish professional relationships with the clients to meet their demands.
- ❖ Organize and train managers and engineers with good engineering exposure.
- ❖ Provide extended service to our clients that include drawings, designing, plans, estimation and execution of plans in consent with the government.
- ❖ Organize the team of skilled technicians to meet the electrical wiring and system installation following the standards of authorities.
- ❖ Maintaining the standards of construction to meet the guidelines of the municipality, water and electricity department and the civil defense.

PROJECTS COMPLETED

WORLD'S LARGEST MERCEDES BENZ SHOWROOM

THE WORLD'S LARGEST MERCEDES BENZ FACILITY IN MUSAFFAH, ABUDHABI.

The most prominent achievement and a milestone in the professional expertise of the company. Being a multifaceted facility, revolutionary design concepts were adopted to meet the standards as expected by Al Fahim groups.

The building structure consist well grounded steel structure, precast concrete & showroom with space frame structure with cost effective design concepts while meeting the wide range of multipurpose use of the facility.

Gulf Erection Co. LLC
Abu Dhabi, UAE

Subject: Letter of Appreciation

We at Abu Dhabi International (Pvt.) School want to extend our gratitude towards the Gulf Erection Co. LLC, Abu Dhabi for the successful and timely completion of the Abu Dhabi International (Pvt.) School building in Mohamed Bin Zayed City, Sector Z17-01, Plot P1b, Abu Dhabi. Within a short time of not more than 15 months, the project was successfully completed and the school was able to open its doors for its students in due time. We truly would like to express our appreciation for your hard work and efforts, as well as your integrity and honesty in your professional work and practice.

We wish all the success to the management team and the site team who worked to fulfill the project. It will also be a great pleasure for us to work with you again in the event that new business and opportunities arise in the future.

Sincerely,

George Alexander

ORGANISATION CHART

FIRE FIGHTING SYSTEM

ACTIVITIES & SCOPE OF WORK

Gulf Erection is approved & certified by Abu Dhabi Civil Defense Authority to practice such activities”

- Design & build smoke management system as per civil defense and NFPA rules & regulations.
- Design & fixing external & internal cladding system as per civil defense rules & regulations.
- Application of fire paint, fire proof material and other fire stop material.
- Installation of fire rated doors

SMOKE MANAGEMENT SYSTEM

Smoke Management System:

Smoke Management Systems are designed to reduce smoke in industrial buildings, such as post-fire conditions, by utilizing mechanical fans, dampers and other means. The following purposes are addressed by a smoke management system:

- Roof hatch ventilation for smoke removal in high atrium spaces
- Smoke exhaust fans in parking garages
- Pressurization fans in stairwells and/or elevator shafts

There are challenges at every stage of the project, so understanding the smoke control design and installation process can be difficult. These systems are typically codes based on occupancy type, building construction method, occupancy load, and various other factors. Since no entity or industry is responsible for the complete solution, the interdependence of all professional engineering and installation industries is critical to the success of the project.

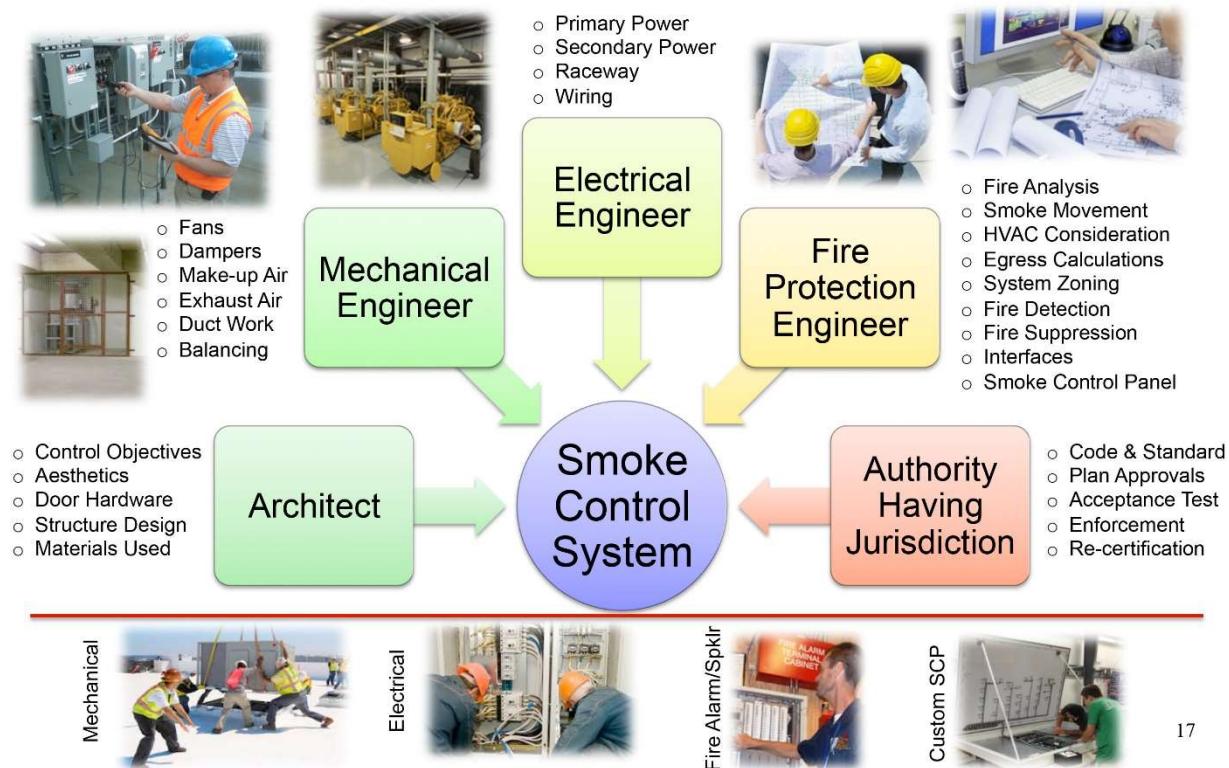

The diagram below illustrates the various disciplines required to properly design and install a smoke control system. Many of the same people will be involved in the smoke management system, but will be less involved during design, installation, and testing.

SMOKE MANAGEMENT SYSTEM

DESIGN RESPONSIBILITY

CLADDING SYSTEM

After numerous major fires recently occurred, no one doubted the importance and critical nature of fire protection of high-rise building exterior wall systems. These cladding systems are often referred to as rain screens or curtain wall systems. For more than 10 years, Many companies has been at the forefront of developing the highest performance ventilated fire barriers (also known as "open cavity barriers") for exterior wall systems, and the products have been continuously improved to achieve higher fire performance. The Problem? Many types of cladding rely on an open cavity behind the cladding to function properly in isolating elements and optimizing thermal efficiency. This type of cladding system creates an open vertical cavity that acts like a chimney in the event of a fire. The "chimney effect" of the open cavity doubles the length of the flame in the cavity, causing the fire to spread rapidly to the outside of the building. Even if the cavity itself is completely non-combustible, the extended length of the flame created in the "chimney" still allows the flame to reach the next level, where penetration from windows and other walls will allow the fire to re-enter the building. . And keep the fire spreading. Many buildings use combustible insulation products in the liner cavity, which will add fuel to the fire, causing the initial fire to provide an ignition source, the chimney to draw in air, and the combustible parts of the cavity to provide fuel. The rapid spread of fire and intensify the perfect scene unless stopped.

With rapid changes in building exterior wall technology and systems, Gulf Erection team can rest assured that the fire protection industry is constantly improving and developing products to meet and exceed the latest requirements, and provide solutions to protect buildings and their occupants and always updated to provide the best solutions.

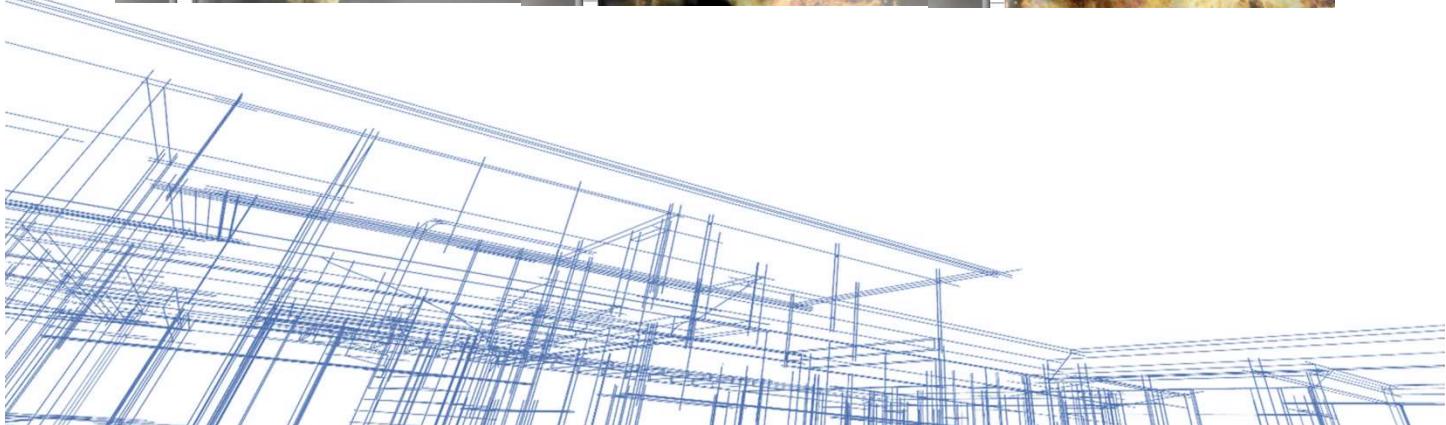

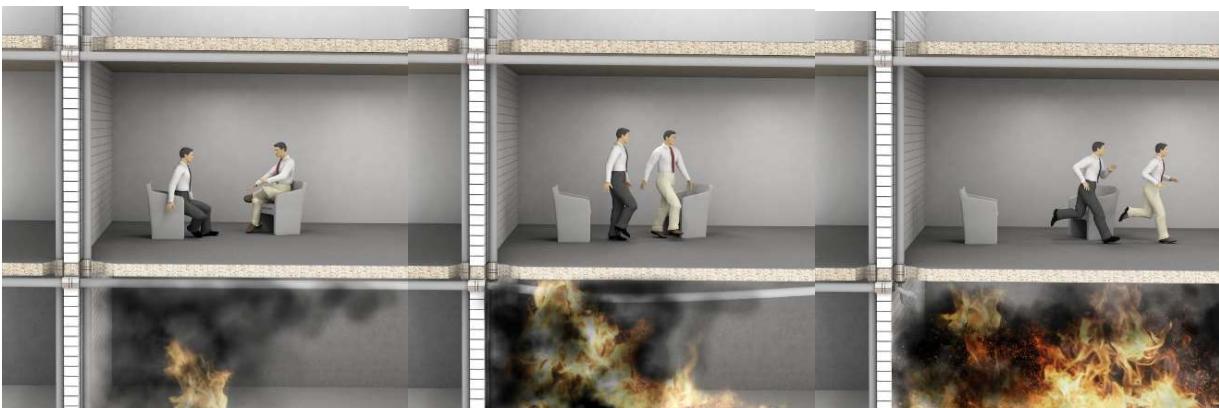

FIRE STOP & FIRE PROOF MATERIAL

Fire stop is a multi-component fire protection system used to seal openings and joints in fire resistant wall or floor components. For penetrating cables, they can also be referred to as multiple cable transit (MCT). The fire panel is designed to restore continuous fire resistance to wall or floor components by filling openings with refractory materials to prevent fire from spreading.

Fire protection is best defined as sealing any opening to prevent fire (including smoke and heat) from passing through various compartments of the building. The spread of fire is controlled by creating fire compartments, which subdivide the building (vertically or horizontally). Buildings must ensure that all openings and gaps are fireproof to limit the spread of horizontal and vertical fire.

HEALTH, SAFETY AND ENVIRONMENT

INTEGRATED HEALTH, SAFETY AND ENVIRONMENT POLICY

At Gulf Erection Co. LLC, we value the wellbeing of our employees, contractors, customers, the communities in which we operate and the environment. We are committed to responsible management practices that minimize any adverse health, safety or environmental impacts, and enhance benefits associated with our activities, products or services.

To achieve these goals, Gulf Erection Company shall adhere to the following principles:

- Ensures that Gulf Erection Co. LLC has implemented a management system that is certified to the international standards ISO 9001, ISO 14001 and OSHAS 18001.
- Ensures that the HSE Policy is communicated and understood with the organization and made available to its contractors, suppliers, third parties and all other stakeholders.
- Encourages its staffs and workforce to join with the company in full acceptance and compliance with OSHAD / AD HSE Policy.
- Reviews objectives and targets on a regular basis and continually improves the effectiveness of HSE management system for the long term sustainability of the Health Safety and Environment.
- Comply with the relevant UAE legislations, regulatory requirements, industry codes, standards and other requirements.
- Ensures availability of a safe and healthy work environment protecting the staffs, workers and third parties free from personal injury or occupational illnesses.
- Shall identify, assess and manage HSE risk prior commencing all work activities in the factory and at the project sites.
- Provide adequate human, financial and time resources to ensure the effectiveness and sustainability of the HSE Management System;
- Conserve and protect the water, air, land resources we use and we will strive to eliminate any releases to land, air, water that may harm human health or the environment.
- Minimizing the generation of waste where possible and initiates measures for the prevention of pollution.
- Provide appropriate training to all employees to ensure operatives are aware of safe work practices procedures.
- Implement programs and procedures to satisfy compliance and will conduct compliance audits and monitoring practices to evaluate HSE performance.
- Committed to ensure the availability of information and of necessary resources to achieve objectives and targets.
- Builds a culture of continual improvement and empower its employees to take decisions by clearly defining their roles, responsibilities and authorities.
- Review Health, Safety and Environment Policy regularly for continuing suitability.

TYPE OF PROJECTS HANDLED

Since 1980's M/s. GEC has been successfully completed many prestigious project. Since then we are keeping the good relationships with our most valuable clients in all aspects. Without the help of the valued client we will not be achieved the current status in the land of United Arab Emirates.

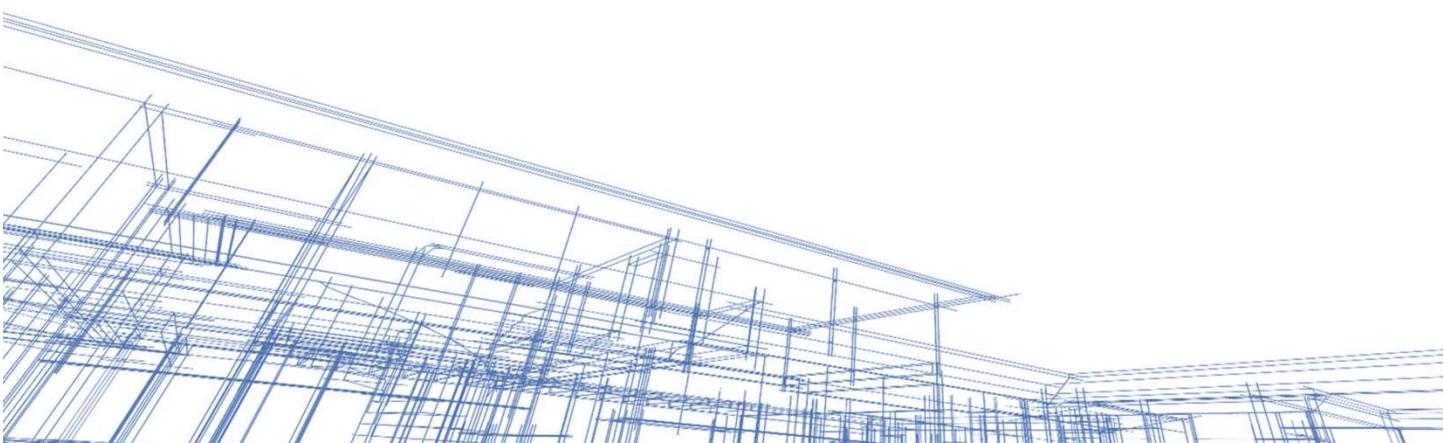

Dealing with varied type and nature of clients/work, M/s. GEC has systematically organized the teams for each type works, projects, etc. For HSE department -as per client requirement, the senior management will grade the HSE requirement of site accordingly. The same has been advised to the HSE team through HSE coordinator and necessary steps will take according to the protocol.

 GULF ERECTION CO.		PROJECT RATING CRITERIA- HSE									
		Doc. No:-	GEC/QHSE/PRC-01	Rev.	01	Approved by	Engr. GABY				
		Date:-	12-12-2018	Sheet.	01	Project:	FMC, ICAD-3
